

Ensuring a consistent process for
transmission line CCNs

AECT Position: Support Fraser

**HB 1926 by Kacal
Sponsor: Fraser**

Proposal

- HB 1926 requires all municipally-owned utilities, if building transmission outside of their traditional service territory, to seek a certificate of convenience & necessity (CCN) through the PUC and follow the same routing process as any other electric utility.
- The bill also continues the Texas Municipal Power Agency (TMPA), a collective of municipally-owned utilities that includes Bryan, Denton, Garland and Greenville.

Discussion

- AECT supports HB 1926, as the bill ensures a level playing field for all utilities building transmission in Texas.
